

An update...

After putting my project on the THL website I have received many responses. John Knight (Nostromo) said *'I checked out your website and was hugely impressed by your Eco Consultant. Such enthusiasm gives me hope that we do have a future.'*

Stuart Branson (Spirit of Jethou) states *'after reading Daisy's project I will sail more and use my engine less.'*

- A science teacher at Priestlands school who is also head of ECO 'Kit Rogers' has agreed that THL will plant an orchard to offset their carbon footprint. I am running this project along with Kit.

We have decided to set up a carbon offsetting programme offering local industries the opportunity to offset their carbon footprint by funding school eco projects. These projects will help school. Learn about being eco friendly, how to reduce their own CO2 emissions, and sustainable living. It will be a local project so companies offsetting their carbon footprint will be able to see and learn from their funds.

- David Glenn from Yachting World magazine has asked me to supply them with an article for the Palma 2008 Superyacht Cup about acting on CO2 emissions by tree planting. I have also been asked to visit Palma for the Superyacht Cup to report on the boats and their carbon friendliness.
- I have been given a thousand pounds to create my own website, to encourage others in the yachting industry to be more CO2 aware and to sell eco friendly products. I have already sourced and tested cleaning products for yachts (riptide), and towels and toiletries (albatross). My website will be called ecodaisy.com. Look out for it next year!
